

International Summer School on Sustainability

25th to 29th July 2022
OST Campus Rapperswil

**Are you interested in
climate change and
sustainability?**

**Do you want to have
action & fun?**

Join us!

International Summer School on Sustainability

The Sustainability Summer School will focus on climate change mitigation and sustainability. With international experts and applying interactive VARK learning methods, participants will gain new knowledge and competencies about technical solutions to reduce our ecological footprint.

After the Sustainability Summer School, we encourage participants to continue their experience by organizing a Sustainability Week in their home universities. The aim is to build change agents to support increasing the capacity of young people to become active participants in shaping a more sustainable future.

Presentations & Workshops

- Sustainability (funding and implementation)
- Environmental engineering
- Renewable energy: solar, water, wind
- Energy storage
- Sustainable refrigeration and heat pump technology
- Clean water
